

Strategy Reset v2

New direction · the investment · the milestone close-out

Prepared for the client call · 17 June 2026 · Milestone 1 · content engine · budget · bonus · payment

The first 15 days are delivered and the system is built. They didn't break through on reach — so this document does two things: it closes out the completed milestone, and lays out a sharper, evidence-led engine for the next cycle, with a clear, fixed investment so we both know exactly what we're putting in before we set off.

1 · Milestone 1 — First 15 Days (Delivered)

The first 15-day content block — scripts, AI avatar production, platform-ready edits and scheduling across Instagram, TikTok and YouTube — is complete and delivered. This is contracted, finished work and is independent of the new direction below.

Deliverable	Amount
First 15 days — full content block, produced & published (completed)	\$750.00
Release to close Milestone 1	\$750.00

Recommended action: release Milestone 1 today. The new cycle starts on a clean slate once this is settled.

2 · Why Month One Didn't Break Through

An honest read — so the fix is targeted, not guesswork:

- **The hook lost the first 3 seconds.** Static opens get scrolled past before the message lands.
- **We led with polish, not friction.** The feed rewards a sharp, contrarian opening line, not a calm intro.
- **No proven structure underneath the posts.** Good content, but not shaped like what already wins in this niche.
- **No paid reach.** Organic-only on cold accounts barely distributes. Nothing was filling the funnel.

3 · The New Direction — Model What Wins, Then Put Spend Behind It

Step 1 — Reverse-engineer proven winners

We study posts in the business-acquisition / “boring wealth” niche that have already done millions of views, and break down the structure that made them work — hook, pacing, on-screen text, the emotional turn, the call to action. We model that proven structure, then write original Anya content into it. The framework is borrowed; the script, voice and brand stay 100% ours.

Step 2 — Build for all three platforms

Each idea is produced as native content for YouTube, Instagram and TikTok — correct format, length and end-card per platform — using the AI avatar + motion stack. One proven structure becomes three platform-native assets: more surface area for the same production effort.

Step 3 — Paid boost: the reach lever (7-day push)

Once a post is live and performing, we put paid spend behind the best ones for a full week across all three platforms. This is what gets Anya in front of large, cold audiences fast — the difference between a good post nobody sees and a good post that compounds followers and signups. Organic earns the right; paid pours fuel on it.

4 · Production & Ad Budget — Everything It Takes To Run One Cycle

Full transparency on what the engine costs before we start. Two parts: the monthly tool stack that produces the content, and the one-week paid push that distributes it.

A · Monthly tool stack (production)

Tool	What it does	Plan	Monthly
HeyGen	AI avatar video + Seedance motion (the talking, moving Anya)	Pro / Scale	\$99
Higgsfield	Cinematic B-roll & motion shots for the first 3 seconds	Ultimate	\$49
Claude	Scripts, contrarian hooks, captions, structure breakdowns	Pro	\$20
Metricool	Scheduling + analytics across all 3 platforms	Advanced	\$22
ElevenLabs	Voiceover / narration	Creator	\$22
CapCut Pro	Editing, captions, end-cards	Pro	\$10
Canva Pro	Carousels, covers, thumbnails	Pro	\$13
Tool stack subtotal — per month			\$235

B · Paid boost (7-day push across 3 platforms)

Platform	Format boosted	Per day	Days	Total
Instagram	Reels + carousels	\$30	7	\$210
TikTok	Spark Ads / Promote	\$30	7	\$210
YouTube	Shorts / in-feed	\$25	7	\$175
Paid boost subtotal — recommended (Standard) tier				\$595

Boost is adjustable: Lean ≈ \$315/week (~\$15/day each) · Standard (recommended) ≈ \$595/week · Aggressive ≈ \$1,050/week (~\$50/day each). Standard is the level that reliably moves follower and signup numbers in a 7-day window.

C · One-cycle total

Component	Amount
Monthly tool stack (production)	\$235
Paid boost — 7-day push (Standard)	\$595
Contingency buffer (~10% — failed renders, platform ad fees, re-exports)	\$85
Production & ad budget — one cycle	\$915

This is the project's running cost, separate from the Milestone 1 release. Any tools already owned can be deducted directly.

5 · Restructured Performance Bonus — Tied To What We Control

The original bonus — \$500 for the first 40 paid signups — rewards an outcome that sits past our handoff. Whether a warm lead converts to a paid challenge depends on the sales page, the price and the follow-up — none of which we run. So we're proposing to re-tie the same reward to the metric we do own and drive directly:

New bonus: paid on free-community signups

Structure	Rate	Target	Bonus
Per verified member into the free community	\$5 / signup	100 members	\$500
Same budget as before — now tied to a number we can move			\$500

Why this is better for you: getting people into the free community is exactly the job our content does — so the incentive lines up with the work, and it builds you an owned audience you keep marketing to for free. It's fully measurable, fully attributable, and scalable on your call: if you want more momentum, we lift the target (e.g. 250 members → \$1,000) at the same per-signup rate.

6 · The 10-Day Test & Decision

We run the new engine on 10 scripts over 10 days, with the 7-day paid push behind the best performers. At the end we read the numbers together — reach, follower growth, and free-community signups — and decide whether to scale, adjust, or stop. No open-ended commitment; a clear checkpoint.

7 · What We're Asking For Today & How To Fund It

Your fee for this phase

The first 15 days were billed at the original content rate — \$750, half of the \$1,500/month engagement. This next 15-day phase is \$1,000: the scope expands from producing content to running a managed campaign — viral-structure research and hands-on management of the paid boost across all three platforms — which the first block didn't include.

#	Item	Amount
1	Milestone 1 — first 15 days, delivered (close-out)	\$750
2	Management fee — next 15-day phase (research + managed paid campaign)	\$1,000
3	Production & ad budget — one cycle (tools + 7-day boost)	\$915
4	Performance bonus — paid on free-community signups (on results)	\$500

Item 4 is paid only on delivered signups. Items 1–3 are what we need to close out and set off.

Two ways to pay

Option A — Release via milestone

- ✓ Funds settle in ~7 days
- ✓ Stays inside the platform's protection for both sides

Best if you'd rather keep everything on the existing milestone rails.

Option B — Direct transfer (fastest)

- ✓ Sent to my personal US account
- ✓ Clears in ~2 days — we start almost immediately

Best if you want the new cycle moving this week. Off-platform, so it's a direct trust arrangement between us.

Either route works on my end — it's purely a question of how fast you want the next cycle to start.
