

Phase 2 — The Kumar Method Build

Your channel · your avatar & voice · real sales

Prepared for Dr. Sandeep Bansal · 18 June 2026 · Instagram-only launch

Covers: the new build · production budget · management · sales projection · recovery · bonus · how to start

Sandeep — thank you for the call. Here is the full plan we agreed, with the exact build, the budget, and an honest projection of the sales it should generate over the first 15 days. The headline: the model is designed so the revenue from the 5-Day Challenge recovers what you put in, while you keep the audience, the trained avatar and the voice as lasting assets.

1 · What Changes — The Kumar Method, On Your Own Brand

We're pausing the separate Anya persona and building around **you**. The approach is modelled on the Kumar Method — the engineered-virality format behind the “retired accountant” reels that did 35M+ views this month: a real, credible expert, cinematic character-led short videos, a sharp contrarian hook, and structures lifted from posts that have already proven they go viral. We apply that exact playbook to Officially Invested.

- **Your face, made consistent.** We train Higgsfield *Soul* on your images so every video has a clean, consistent on-screen you — without you filming daily.
- **Your voice, cloned.** Retensis AI clones your voice so the narration is unmistakably yours.
- **Proven structures.** We study reels in the business-buying niche that already hit millions of views and rebuild that structure with your message and your deals.
- **One platform, done properly.** We focus entirely on your Instagram (@officially.invested) for now — 2 posts/day — rather than spreading thin.

2 · How The Funnel Turns Views Into Sales

Every post points to one journey. We don't sell on the feed — we move people into your world and let your existing assets close them:

Step	What happens
1 · Reel	Cinematic, Kumar-style short on your Instagram — hook in the first second.
2 · Landing page	Viewers tap through to the landing page for the free community.
3 · Free community (Skool)	They join “Officially Invested: First Deal” — warm, primed, and watching.
4 · The video sells	Inside, your video sells the \$97 5-Day Deal Challenge.
5 · Sale	They buy the \$97 Challenge. This is the number the bonus is tied to.

So our job is to fill the top of that funnel with the right people, at volume, cheaply — and the paid boost is what guarantees the volume.

3 · Milestone 1 — First 15 Days (Delivered)

The first 15-day block is complete. Please approve the milestone on Upwork so we close it cleanly and move into the new build.

Deliverable	Amount
First 15 days — delivered (approve on Upwork)	\$750.00
Milestone 1 total	\$750.00

4 · Production Budget — What It Costs To Run

Full transparency before we start. Two parts: the tools that build the content, and the paid boost that distributes it. These are the actual plan prices.

A · Monthly tool stack

Tool	Role	Monthly
Higgsfield (Soul)	Train + generate your consistent avatar	\$139
Retensis AI	Clone your voice	\$15
HeyGen	Turn avatar + voice into talking video	\$49
Metricool	Schedule + analytics	\$53
Claude	Scripts, hooks, viral-structure breakdowns	\$20
CapCut Pro	Editing, captions, end-cards	\$10
Tool stack subtotal — per month		\$286

B · Paid boost — Instagram (15 days)

Item	Detail	Total
Posts	2 per day × 15 days = 30 posts	—
Boost spend	\$30 / day × 15 days	\$450
Paid boost subtotal		\$450

C · Production budget to set off

Component	Amount
Tool stack (one month)	\$286
Instagram paid boost (15 days)	\$450
Production budget total	\$736

This is the running cost of the engine, separate from fees. A small ~\$40 buffer for failed renders / platform ad fees is wise but optional. Anything you already pay for, we deduct.

5 · Management Fee — Billed Weekly

For running the whole operation — avatar + voice build, viral research, daily scripting and production, scheduling, boost management and reporting — the fee is billed weekly so you only ever pay for the week ahead and can stop any time.

Management fee	Amount
----------------	--------

Per week	\$400 / week
Across the 15-day cycle (~2 weeks)	\$800

Weekly billing keeps it low-risk for you: you see the numbers each week before funding the next.

6 · The Sales Target — 50 Sales In 15 Days

This is what we build the whole engine to hit. It's an honest, bottom-up estimate from the Instagram funnel — not a guarantee — but it's the target the boost spend and the Kumar-style reels are designed to reach.

The funnel maths

Stage	Rate	Result (15 days)
Landing-page visitors (paid + organic)	—	~2,500
Join the free community	25%	~625 members
Buy the \$97 Challenge (the in-community video)	8%	~50 sales
Revenue at \$97		~\$4,850

How it builds across the two weeks

Week	Focus	Sales	Revenue
Week 1	Build avatar + voice, launch, first reels	18	\$1,746
Week 2	Full cadence, boost behind the winners	32	\$3,104
15-day total		50	\$4,850

Week 1 is lighter because the first days go into training your avatar, cloning your voice and launching — momentum compounds in week 2. And a single reel breaking out (the whole point of the Kumar Method) can push well past 50.

7 · You Profit — Even After The Bonus

Here is the part that matters. At the 50-sale target, the Challenge revenue covers every cost of the cycle — including the performance bonus — and still leaves you in clear profit.

Your investment (15-day cycle)	Amount
Milestone 1 — first 15 days (delivered)	\$750
Production budget (tools + boost)	\$736
Management fee (~2 weeks @ \$400)	\$800
Performance bonus (on 40 sales)	\$500
Total all-in, including the bonus	\$2,786

Against projected revenue

	Amount
Projected revenue — 50 sales x \$97	\$4,850
Less: total all-in for the cycle (incl. bonus)	- \$2,786
Your profit on the cycle	\$2,064

- At the target you clear roughly **\$2,064 in profit** after paying every cost *and* the \$500 bonus.
- That's exactly why the bonus makes sense — it only triggers once you're already deep in profit, so it comes out of money you wouldn't have without the work.
- And you keep the trained avatar, the cloned voice, the new followers and the community members as assets that keep selling long after the 15 days.

The \$97 sale is only the front door: every Challenge buyer is a warm lead for your higher-ticket coaching and deal work, where the real lifetime value sits.

8 · Performance Bonus — Tied To Real Sales

As agreed, the bonus is attached to actual \$97 Challenge sales — the outcome we're now driving directly:

Trigger	Bonus
On the first 40 sales of the \$97 Challenge	\$500
Success-based — only paid once the sales land	\$500

At 40 sales you've already taken ~\$3,880 in Challenge revenue, so the bonus is fully self-funding. If you want to push harder, we can raise the target and the boost together.

9 · To Start — What We Need & How To Pay

- **Approve Milestone 1 (\$750)** on Upwork.
- **Release the production budget (\$736)** so we can buy the tools and start the boost. **We can only begin once this lands** — the avatar training, voice clone and ads all run on it.
- **Management at \$400/week**, billed weekly as we go.

How to send the production budget — your choice:

Option A — Upwork Keep it all on-platform. Simple and protected for both sides.	Option B — Direct transfer Sent to my account; clears faster so we start sooner.
---	--

Whichever you prefer is fine on my end — it only changes how fast we can switch the engine on. Approve the milestone and send the budget, and we start the build the same day.
